

We talked and re-take a look at the FIP feedback record from our professors and Paul (our client) and established some new tasks for each one in the team to be completed for next week.

TASKS:

Sandro - Updating the desktop website version and making the mobile version, also he will update the logo with the advice Joe gave us.

Also, he will be helping with the design of the Event marketing strategy.

Selena - Styling the actual website according to Sandro's Design and she also will make the mobile version of the website. The website will be filled up with the actual LRG information that I have gathered.

She will record the 10 minutes script I will send to her.

Elena - She will connect the Server side to the Client side of the website, as well as adding the login function to the Login Page. This will take a bit more time since we need to make some research about this.

Viktoria - She has done some nice styleframes for the next video presentation, and is currently working in the animation and construction of the video, she also made a little script that follows the sequence of the video.

Andres - I will try to set up a meeting with Paul from LRG and Justin, we still have some missing information and it is too slow to communicate via email.

Also, asking to Pan about the specific requirements of the FIP he needs for his class, making the 10 min script for the next presentation for Selena.

Making the Event marketing strategy, it is a Joe's advice, so I will add to the marketing plan.
