

Meeting Notes Week 10-2

We are almost done with the project, still need some work in the back-end, some pages are still missing in the web site, the design is complete except for the pages we don't have done, they are the exclusive pages where LRG members will be able to edit, add and delete content from the Website. The animated video is already done, with some illustrations on it. And the video for the presentation is in process, we already have the script done, the voice will be recorded and the video is being built, we already have the logo animation for the presentation video.

Task each team member will be working on:

Sandro:

He will edit the pictures for the web site. the definitive ones.

Selena:

She is working in the style of the website, correcting some small details, also she will connect the back end with her front end work. She will work on a hamburger menu and drop down menus.

Elena:

She is working in the back end, already has the pages done in php, and the login functionality is already working, she will keep working in the edit, add and delete content functionality. Her CMS is amazing!

Viktoria:

She is working on the final video presentation, already has the main structure for the video, and the logo animation is so good, the colours for the video style are selected.

Andres:

I already wrote the script for the presentation, and will have to create the event marketing strategies to present them in the video, with also some mockups of the events. The database is already done with the info for the website.
