MEETING NOTES WEEK 7

Asking about the covid information to Justin

We discussed whether to keep the phases of the project in the next presentation or not, so we decided to do so.

Also, a revision of the Web Site design was done, everything looks good. However we still need to gather and organize all the information that will be inside the web site.

Motion design:

The video part is on the road, we already have the design established, since the last presentation was not well welcomed.

Front-end:

The front-end is in process and some pages are already done.

Back-end:

The back-end is still in process, we will implement Vue.js and will not use PHP for the back end; We instead will retrieve the info by js.

Graphic design:

The ads design has been changed and we are doing some others this week.

Colors are selected, and the images provided by LRG are the most used ones here.

Typography is not yet selected for the web site, however for the ads we already have some, there may be many typographies.

Logo is being reformed since they did like the other one but it may not be well readed in small sizes.

The script for the presentation is almost done, one thing will be added after this meeting.
